THRYVE

THE EMFACE EVOLUTION

Grounded in intelligent, evidence-led science, EMFACE works with the underlying structure of the face, strengthening muscle support while improving skin quality, allowing results to develop gradually and naturally over time.

This is not about changing the face.
It is about supporting it, strengthening underlying structure and improving skin quality.

The result is a subtle lift, a sense of balance, and skin that appears healthier, firmer and more refined.

Quiet, confident improvement.

THRYVE EMFACE

THE SCIENCE

EMFACE is designed to support the face as a whole.

Using a combination of radiofrequency and targeted muscle stimulation, it works across multiple layers, supporting collagen, strengthening elastin, and improving muscular tone.

By addressing both skin and muscle simultaneously, it offers a more comprehensive approach to facial rejuvenation.

THRIVE EMFACE

THE TREATMENT

EMFACE is a non-invasive, needle-free treatment.

Each session lasts approximately 20 minutes, with no downtime required. A course typically consists of 4–6 treatments, performed weekly and guided by individual response.

Treatments are delivered to one or two carefully selected areas, commonly including the forehead, eye area, cheeks, and lower face, such as the submental region (under the chin) and jawline.

Applicators are positioned to the skin, delivering controlled warmth alongside gentle, rhythmic muscle contractions.

This combined approach works across both the skin and underlying facial structure supporting collagen and elastin within the dermis, while strengthening the muscles that support the face.

While individual treatments are possible, EMFACE is most effective when approached with consistency.

Over time, results build gradually, improving skin quality, enhancing structural support, and maintaining a more lifted, refined appearance.

THRYVE EMFACE

SUITABILITY

EMFACE is suited for those beginning to notice early changes in facial structure and skin quality.

This may present as a gradual softening of facial support, heaviness through the lower face or submental area, early jowl formation, or changes around the eyes and forehead associated with reduced muscle tone and skin elasticity.

In some cases, it may also be appropriate for individuals experiencing patterns of facial tension or imbalance through the jaw, where overall muscle support and coordination can be gently improved.

By addressing both the skin and underlying musculature, EMFACE supports a more balanced, natural restoration of facial structure.

All patients will undergo a detailed clinical consultation to assess suitability and guide a personalised treatment approach.

THRYVE EMFACE

INVESTMENT

A course of 4–6 treatments is typically recommended, performed weekly and guided by individual response.

Single Sessions

Treatments can be undertaken on a pay-as-you-go basis:

One area: £330

Two areas: £440

Course Investment

For optimal, sustained results, EMFACE is best approached as a structured course:

One area

- 4 sessions: £1,250
- 6 sessions: £1,800

Two areas

- 4 sessions: £1,750
- 6 sessions: £2,400
